THE CLASS ACTION FAIRNESS ACT AND COLORABLE REASONS FOR SEPARATE CLASS ACTIONS

Kevin Tamm*

I. INTRODUCTION

The Class Action Fairness Act (CAFA), codified at section 1332(d) of the U.S. Code, grants the federal courts jurisdiction over civil class action suits with minimal diversity, at least one hundred plaintiffs, and amount in controversy more than $5 million. However, the statute is silent in situations where there is minimal diversity, at least one hundred plaintiffs, and the amount in controversy is $4,999,999. Furthermore, the statute provides no guidance when similar plaintiff classes file multiple irremovable suits against a single defendant. Nevertheless, the lack of statutory guidance in § 1332 did not stop the Sixth Circuit Court of Appeals in Freeman v. Blue Ridge Paper Products, Inc. from aggregating five similar class action lawsuits in order to satisfy CAFA’s removal requirements.

In each of the individual class actions preceding Freeman, the plaintiffs claimed close to $4.9 million, and because the plaintiffs “put forth no colorable reason for breaking up the lawsuits,” the Sixth Circuit aggregated the claims. Other circuit courts have not followed the “colorable reason test” created in Freeman and have distinguished the case on factual differences, statutory interpretation, and the relevance of Congressional intent. The decision in Freeman achieves the result of judicial efficiency, but contradicts the axiom that the plaintiff is the “master of his complaint.”

Part II of this Comment addresses how the Sixth Circuit has used the “colorable basis test” to aggregate class action suits where plaintiffs

have split their claims to avoid federal jurisdiction. Afterward, this Comment analyzes cases from other circuits to explain why other appellate courts have not accepted the colorable basis test. Part III discusses the inherent weaknesses of the colorable basis test, along with possible changes to the language of CAFA that would remedy the problems Freeman attempted to address. Part IV concludes that that Congress must amend § 1332(d) to better guide judges in complex class removal situations.

II. BACKGROUND

Since Congress passed the Class Action Fairness Act of 2005, courts have cited a litany of congressional records to explain the application of the law.9 The general intent of CAFA was to provide defendants an easier road into federal court to prevent bias in plaintiff-friendly state courts.10 The relevant Senate Report explains that CAFA “mak[es] it harder for plaintiffs’ counsel to ‘game the system’ by trying to defeat diversity jurisdiction” and “creat[es] efficiencies . . . by allowing overlapping and ‘copycat’ cases to be consolidated . . . .”11 Additionally, CAFA allows cases of “national importance” to be removed more easily to the federal courts.12 The various purposes of CAFA, combined with a lack of explicit statutory guidance, have led to a divergent jurisprudence concerning aggregation in class action suits, which will be discussed herein.13

A. The Colorable Basis Test as a More Searching Inquiry

The Sixth Circuit was the first, and remains the only, circuit court to support the colorable basis test for aggregating class action claims.14 In Freeman v. Blue Ridge Paper Products, Inc., Tennessee landowners sued a North Carolina paper mill for polluting a local river.15 The landowners divided their claims into five separate lawsuits based on

sequential time periods related to the total span of pollution. Each suit had the same plaintiffs and claims, and the damages in each case totaled near $4.9 million. The defendant successfully removed the cases to federal court; however, the plaintiffs later succeeded on their motion to remand to state court. The defendant corporation then appealed to the Sixth Circuit to reverse the district court judgment; the Sixth Circuit reversed and remanded the cases to the federal district court.

The Sixth Circuit held that the remand to state court was improper because the “[p]laintiffs put forth no colorable reason for breaking up the lawsuits . . . other than to avoid federal jurisdiction.” The court found no “colorable reason” to divide the suits by time periods, partly because the plaintiffs’ counsel admitted he structured the case to avoid federal jurisdiction. Furthermore, the court noted that the structuring would frustrate the “Congressional intent and purpose of the CAFA.” The court limited its holding to situations “where there is no colorable basis for dividing up the [class actions] into separate time periods, other than to frustrate CAFA.”

The *Freeman* court derived its reasoning from an earlier district court opinion in the Sixth Circuit. In *Proffitt v. Abbott Laboratories*, the plaintiffs filed eleven class action lawsuits with the same plaintiffs and defendant. The plaintiffs argued that being the master of the complaint entitled them to disclaim damages over $4,999,000 and separate the suits; however, the court stated, “It is apparent . . . that the time divisions are a deliberate attempt to circumvent the CAFA . . . .” The court noted that the plaintiffs might have arranged the suits in other ways, such as two-year divisions, because the time divisions had no purpose other than avoiding federal jurisdiction. Citing the Senate Judiciary Committee and congressional findings, the court concluded, “When Congress amended 28 U.S.C. § 1332, it intended to broaden federal court jurisdiction.”

Shortly after the holdings in *Proffitt* and *Freeman*, the colorable basis test was applied again in the Sixth Circuit. 28 In *Hubbard v. Electronic Arts, Inc.*, current and former college student athletes filed three similar class action suits. 29 The first suit, *Hubbard I*, contained antitrust-related claims, and the second, *Hubbard II*, had multiple state law claims. 30 The plaintiffs’ counsel also filed a third class action suit, *Nuckles*, on behalf of former student-athletes. 31 *Nuckles* was nearly identical to *Hubbard II*, which counsel filed on behalf of current student athletes. 32 The plaintiffs accused Electronic Arts (EA) of monopolizing NCAA football video games, raising game prices artificially by eliminating competition, and abusing students by not paying for their likenesses. 33

EA removed the cases using CAFA’s removal provision, and the district court denied plaintiff’s motion to remand. 34 The plaintiffs in each of the three suits capped their damages at $4,999,999.00, 35 and the court found that counsel filed the complaints separately to avoid federal jurisdiction. 36 The court agreed that plaintiffs “may defeat removal to federal court by suing for less than the jurisdictional amount[,]” and that “[i]t is generally agreed in this circuit, that the amount in controversy should be determined from the perspective of the plaintiff . . . .” 37 On the other hand, the court emphasized that damage disclaimers do not preclude a defendant from removing a case if the defendant can show it is “more likely than not” that the minimum amount in controversy will be met. 38

Regarding the *Hubbard II* and *Nuckles* suits, the district court attempted to reconcile the *Freeman* colorable basis test with an earlier Sixth Circuit case. 39 *Smith v. Nationwide Property & Casualty Insurance Co.* held that where the plaintiff had claimed $4,999,999.00 in

breach of contract damages, the suit could be remanded because the defendant failed to show that the damages would “more likely than not” exceed $5 million.  

The court experienced difficulty reconciling the deferential “plaintiff is master of his complaint” logic from Smith with the “colorable reason” logic from Freeman. The court noted the Freeman test was not “clearly define[d]” and did not “give instructions on its application.” Plaintiffs’ counsel attempted to distinguish Freeman by explaining that the plaintiffs and defendants in the Hubbard II and Nuckles suits were different; however, the court found this was not a “legitimate purpose.” Finally, the court aggregated the claims in Hubbard II and Nuckles, having not found a colorable reason for the structuring.

B. Distinguishing Freeman’s Colorable Reason Test From the “Plaintiff as the Master of the Complaint”

Other circuit courts have not followed the colorable reason test and typically distinguish Freeman on minor factual differences or completely avoid it. An example is the Eighth Circuit case Marple v. T-Mobile Central LLC, where T-Mobile, prior to the suit, had sued Missouri municipalities for refund of tax payments. The plaintiff, Marple, then sued T-Mobile because she believed the phone company had passed the cost of the tax unfairly onto consumers. Marple brought ten separate but similar class action lawsuits to claim any money T-Mobile might recover in its suits. T-Mobile tried to remove the cases, but Marple won the motion to remand, and the Eighth Circuit affirmed.

The appellate court discussed the statutory language of CAFA and noted the lack of explicit guidance for aggregation between multiple

42. Id. at *21.
43. Id. at *24. In other circuits, this has in fact been found to be a legitimate purpose for separating claims. See, e.g., Barria v. Dole Food Co., No. CV 09-213-CAS(VBKx), 2009 U.S. Dist. LEXIS 27926, at *14 (C.D. Cal. Mar. 9, 2009).

class action suits. The court found “the absence of provisions [in CAFA] for aggregating between class actions . . . suggests that the use of the singular [class action] is significant.” Here, the court distinguished Freeman and found that Marple divided her suits in order to mirror the earlier T-Mobile suits, not to evade federal jurisdiction. In distinguishing Freeman, the reasoning from Marple closely follows that of Freeman’s dissent.

The dissent in Freeman agreed with the majority opinion that a pivotal reason behind CAFA was to prevent plaintiffs from “keeping [class action] cases of national importance out of federal court.” However, the dissent believed the pollution cases were not of such importance that a new claim aggregation rule should be created. Furthermore, the dissent found “no authority” for the creation of a “colorable basis” requirement and argued the plaintiffs could divide their suits based on time because each time the defendant discharged pollutants, a new cause of action may arise.

Additional cases also distinguish the result reached in Freeman.

In Barria v. Dole Food Co., one of a group of many similar class action cases, 2,485 banana plantation workers brought nine causes of action against Dole and other companies. The plaintiffs filed multiple suits with less than one hundred plaintiffs each, and the damages never exceeded $5 million. The defendants argued that the California Superior Court, where the plaintiffs filed, had a minimum jurisdiction limit of $25,000, and therefore the total claims would logically exceed $62 million. The defendant also wanted to question the plaintiffs as to whether the damages they sought were truly under $75,000 per plaintiff.

51. Id. at 1110.
53. Marple, 639 F.3d at 1111. The original suits by T-Mobile against the municipalities were filed according to separate time spans, like the suits in Freeman. Id. at 1110.

56. Id. at 410–11 (Daughtrey, J., dissenting).
57. Id. at 411 (Daughtrey, J., dissenting).
59. Id. at *4, *7.
60. Id. at *8–9. Multiplying 2,485 plaintiffs by $25,000 equals $62,125,000.
61. Id. at *9. In Abrego v. Dow Chemical Co., 443 F.3d 676, 689 (9th Cir. 2006), plaintiffs had lied about the amount they hoped to recover and admitted after remand to state court that they were in fact seeking more than the jurisdictional minimum amount in controversy. See Barria, 2009 U.S. Dist.
Ultimately, the court distinguished *Freeman* by explaining that the different banana planters in each case were “distinct plaintiffs,” and it upheld the “strong presumption” against removal jurisdiction in the Ninth Circuit. The court stated, “defendants have not shown that it is ‘more likely than not’ that any plaintiff’s claim satisfies the $75,000 jurisdictional requirement [or the $5 million aggregate in an individual class suit].” The justices also refused to speculate as to whether any plaintiffs were lying and would not aggregate their claims.

*Freeman* and the many cases that refuse to adopt its logic raise a further issue as to what defendants and plaintiffs must show in order to achieve or avoid removal in the federal circuit courts.

### C. Judicial Standard for Proof of Damages

In addition to the amount in controversy, issues surrounding the standard of proof of damages also affect CAFA removal. The court in *Freeman v. Blue Ridge Paper Products* avoided the issue by first aggregating the claims of the suits, and then stating, “[b]ecause plaintiffs’ suits in the aggregate seek up to $24.5 million, we need not decide the proper standard of proof under CAFA when a plaintiff limits his damages to less than the jurisdictional amount . . . .” The claim aggregation allowed the court to presume that the damages exceeded the required amount in controversy unless proven otherwise to a “legal certainty.”

The court in *Hubbard v. Electronic Arts, Inc.* addressed the issue ignored by the *Freeman* court and explained that, typically, deference should be given to the plaintiffs in determining damages in a suit. However, the court explained that the burden on the defendant to prove damages is only the “more likely than not” standard, which is less rigid than the “legal certainty” standard. With regard to aggregating *Hubbard II* and *Nuckles*, the court explained three situations: (1) where a plaintiff pleads an amount over the amount in controversy, the amount

---

63. *Id.* at *11–12, n.2.

64. *See id.* at *11–12, n.1–2.

65. *Freeman v. Blue Ridge Paper Prods.*, Inc., 551 F.3d 405, 409 (6th Cir. 2008). The defendant was not required to show each suit would likely exceed $5 million because in the court’s view there was only one suit for up to $24.5 million. *Id.*

66. *Id.* This is a high burden of proof compared to the preponderance or more likely than not standards.

68. *Id.* at *8.
is presumed correct and the defendant must prove to a legal certainty it is not correct; (2) where a plaintiff pleads an unspecified amount, the defendant must show with a preponderance of the evidence that the amount is exceeded for removal; and (3) where plaintiff pleads under the amount in controversy, the defendant must show it is more likely than not the amount in controversy is exceeded. In aggregating *Hubbard II* and *Nuckles*, the court once again treated the claims as if the plaintiff had filed only one suit, and found that remand was not appropriate under the “legal certainty” test.

The Eighth Circuit in *Marple* did not address the standard of proof, because the defendant argued only that the claims should be aggregated and offered no evidence to prove that each suit would exceed $5 million. Thus, when the court did not aggregate the claims, removal was inappropriate.

The Ninth Circuit in *Barria v. Dole Food Co.* offered a detailed discussion of the legal standard concerning the defendant’s burden for removing the cases concerning the banana pickers. The court never referred to a legal certainty test; however, it found that the defendants never overcame the “strong presumption” against removal to federal court. The court did not find sufficient “underlying facts” to support the plaintiff’s argument that the individual claims would exceed $75,000, nor that the claims in each suit would exceed $5 million. The defendants presented evidence from prior class actions to show actual damages awarded far exceeded disclaimed damages, but this was not sufficient for the court.

The inconsistent application of the colorable basis test, and varying alternative legal standards, create uncertainty for plaintiffs and defendants. In addition, this line of cases could result in the same problems that existed before the passage of CAFA, including forum shopping and gaming the class action system to stay in plaintiff-friendly state courts. The following parts address the uncertainty these decisions

---

69. *Id.* at *18–21.
70. *Id.* at *24–25. In *Freeman and Hubbard*, then, a high burden of remand fell on the plaintiffs where the amounts in controversy were assumed to be over $5 million and the plaintiffs presumably needed to prove damages under $5 million to a “legal certainty.”
72. *Marple*, 639 F.3d at 1111.
73. *See id.* The amount in controversy for each suit was less than $5 million. *See id.*

have created, and suggest ways to prevent future problems that deficiencies in CAFA’s language might cause.

III. DISCUSSION

Recent class action removal jurisprudence has created a confusing trail for plaintiffs and defendants. Plaintiffs may be hard-pressed to determine when legitimate reasons exist for splitting a suit to avoid removal, especially when splitting damages by time periods is not legitimate, but splitting damages according to defendants’ earlier suits is legitimate.78 Furthermore, judges make removal decisions with little statutory guidance from Congress other than the minimum amount in controversy, minimal diversity, and 100 plaintiffs requirements in § 1332(d). While it is the judiciary’s role to say “what the law is,” it is not the job of the judiciary to legislate where Congress has failed to implement statutory protections.79 Furthermore, class action removal law should not become some tertium quid composed of loose judicial interpretations of CAFA and varying state law burdens of proof. By adding greater detail to § 1332(d), Congress could create more certainty and consistency in complex class removal situations.

A. Current Problems and Furthering the Intent of CAFA

The overriding reasons that Congress adopted CAFA were to make removal easier for defendants and to prevent plaintiffs from forum shopping.80 The Sixth Circuit in Freeman reinforced this point by citing congressional notes concerning CAFA, Senate Reports, and House Reports.81 These sources supported the idea that in the past, lawyers had “gamed” the class action system and thus CAFA was needed to

80. See Freeman, 551 F.3d at 407–08. “CAFA was necessary because the previous law enable[d] lawyers to game the procedural rules and keep nationwide or multi-state class actions in state courts whose judges have reputations for readily certifying classes and approving settlements without regard to class member interests.” Id. at 408 (internal quotes omitted).
81. Freeman, 551 F.3d at 407–08.
prevent further frivolous suits.\(^82\) By choosing to aggregate suits when there was no colorable basis for separating them, the *Freeman* court furthered the intent of many in Congress at the time of the passage of CAFA.\(^83\) However, the court also strayed from the plain reading of the law and added qualifiers to § 1332(d) that are not present in the original text of the statute.\(^84\)

First, because CAFA has no colorable reason requirement for separating claims, the courts in *Freeman*, *Proffitt*, and *Hubbard* overstepped their bounds in imposing a heightened pleading standard on the plaintiffs.\(^85\) In *Freeman*, the court found persuasive plaintiff counsel’s admission that avoiding CAFA was the only reason for dividing the suits, but the court did not explain why it relied on this comment.\(^86\) CAFA does not delve into the intent of plaintiffs or their counsel.\(^87\) Further, the court found CAFA’s purpose “obvious,” but the majority cited only congressional history favorable to its position.\(^88\) Certainly, different legislators had varying reasons for supporting CAFA, and courts should not read in a legal standard, such as here, by requiring a “colorable reason,” where the statutory language is clear.\(^89\)

Justice Daughtrey, the dissenting judge in *Freeman*, skeptically viewed the majority’s approach to furthering congressional intent by constructing a rule to stop plaintiffs from keeping “cases of national importance out of the Federal court.”\(^90\) The dissent noted that the pollution cases should be viewed as “matter[s] of local concern” because the class was composed of property owners from Cocke County, Tennessee.\(^91\) Further, Judge Daughtrey argued that during the period of the river pollution, new causes of action may arise each time pollutants enter the water, thus making the divisions not arbitrary.\(^92\)

\(^82\) Id.

\(^83\) Id. at 408–09.

\(^84\) See 28 U.S.C. § 1332(d) (2011). There is no “colorable reason” requirement for plaintiffs to divide their suits.

\(^85\) See id. Requiring a colorable reason to bring separate law suits in state court is comparable to the risk faced by plaintiffs under the heightened plausibility pleading standards enunciated by the Supreme Court in *Iqbal* and *Twombly*. Here, though, there is no similar requirement for any reason to split class claims enunciated by Congress or the Supreme Court. See Bell Atlantic Corp. v. *Twombly*, 550 U.S. 544, 570 (2007); *Ashcroft v. Iqbal*, 556 U.S. 662, 680–81 (2009).

\(^88\) *Freeman*, 551 F.3d at 407–08.

\(^89\) See *Gross v. FBL Fin. Servs.*, Inc., 557 U.S. 167, 175–76 (2009) (“Statutory construction must begin with the language employed by Congress and the assumption that the ordinary meaning of that language accurately expresses the legislative purpose.”) (internal quotes omitted).

\(^90\) *Freeman*, 551 F.3d at 410 (Daughtrey, J., dissenting) (quoting majority opinion at 408).

\(^91\) Id. The dissent saw a weak interstate connection because the paper mill accused of polluting the river was located in nearby North Carolina and was incorporated in Delaware. Id. at 410–11.

\(^92\) Id. at 411.
unresolved issue, then, is what showing the majority would require without the plaintiffs’ counsel having admitted the suits were structured to avoid federal jurisdiction for the suits to proceed to federal court.93

The dissent, in making its decision, continued to argue that the majority ignored the historical axiom that “the plaintiff is the ‘master of his complaint’”.94 The majority stated that even though there were 300 plaintiffs in each suit, by limiting individual damages at $74,000 and overall damages at $4.9 million, the plaintiffs could have remained in state court because “[p]resumably that overall limit for each time period is binding on the plaintiffs . . . .”95 In response, Judge Daughtrey aptly noted the majority arbitrarily would allow plaintiffs to cap damages in one suit to avoid federal jurisdiction, but not in multiple suits.96 The dissent concluded by stating there is “no authority to support the majority’s adoption of a ‘colorable basis’ requirement . . . .”97

The Freeman dissent had the stronger argument, because without congressional guidance or state law, the majority lacks authority to go beyond the clear language of § 1332(d) and impose a “colorable reason” requirement on plaintiffs. Furthermore, the majority did not lay out factors to guide lower courts in determining what qualifies as a “colorable reason” under this heightened standard. The majority followed the reasoning of Proffitt v. Abbott Labs.,98 which aggregated claims in eleven lawsuits divided into eleven one-year periods because the structuring was “at odds ‘with the Congressional intent and purpose of CAFA.’”99 However, in Proffitt the eleven complaints each pointed to one conspiracy that took place throughout the eleven years.100 In contrast, the defendant in Freeman never showed that the pollution occurred in the same manner over all five of the six-month periods.101

Uncertainty arises when courts rely on congressional intent instead of statutory language.102 The Proffitt court cited a litany of documents to show Congress’s intent including the Senate Judiciary Committee Reports and congressional findings prior to enactment of CAFA.103 The

93. The decision relying in part on this fact makes it seem quite ad hoc.

court also relied on other cases citing congressional history in order to avoid copycat and duplicative law suits in different state courts.\textsuperscript{104} The court concluded, quite properly, that “[t]he intent of Congress was clear that the new § 1332(d) would substantially broaden federal court jurisdiction over class actions.”\textsuperscript{105} However, § 1332(d) carries out that goal when applied as it reads, and the courts should not amplify the intent of Congress \textit{sua sponte}.

Moreover, in \textit{Proffitt} the defendant offered no proof to show the plaintiffs divided their suits to prevent CAFA removal; it was merely “apparent to the court.”\textsuperscript{106} Thus, unresolved issues remain such as whether direct or circumstantial evidence is required to show that there is no colorable reason for division of claims, and whether class actions separated by periods of time must be tied to physical events. If the colorable basis test is not to become merely a judicial carte blanche to impose congressional intent, then further statutory guidance is surely needed.

In applying the colorable basis test, the \textit{Hubbard} court stated, “The [\textit{Freeman}] court did not clearly define the test or give instructions on its application.”\textsuperscript{107} The confused court tried to reconcile the colorable reason test from \textit{Freeman}\textsuperscript{108} with the earlier case of \textit{Smith v. Nationwide Property & Casualty Insurance Co.}\textsuperscript{109} In \textit{Smith}, the defendant failed to carry its burden and could not show that it was “more likely than not” that the plaintiffs’ damages would exceed the claimed $4,999,999.00.\textsuperscript{110} The \textit{Hubbard} court noted from \textit{Smith} that the plaintiff is the “master of his complaint and can plead to avoid federal jurisdiction.”\textsuperscript{111} After reviewing \textit{Smith}, the court ultimately had difficulty reconciling it with \textit{Freeman}, where the court held that “identical” lawsuits must be aggregated when there is no colorable reason for “splintering” them.\textsuperscript{112}

The court noted that the plaintiffs were different in the two suits—current student athletes and former student athletes—and that the plaintiffs sued different defendants.\textsuperscript{113} Yet, the court still found that the

\textsuperscript{113} Id. at *23.
plaintiffs splintered the suits for no colorable reason other than to avoid federal jurisdiction. The court ruled, “It seems that the only way to reconcile Smith and Freeman is that the plaintiff . . . is not the so-called master of his complaint if he specifically drafts it to avoid CAFA by ‘splintering’ identical lawsuits by time.” The court continued, “However, [the plaintiff] is the master of his complaint and can specifically plead to avoid federal jurisdiction by using disclaimers to limit the amount in controversy any other time.”

The result that flows from Hubbard is an absurd extension of CAFA through judicial legislation. The court aggregated the $4,999,999 claims from Hubbard II and Nuckles, where the plaintiffs had sued on behalf of current and former college athletes respectively. CAFA provides in § 1332(d)(6), “In any class action, the claims of the individual class members shall be aggregated to determine whether the matter in controversy exceeds the sum or value of $5,000,000 . . . .” Thus, Congress spoke specifically to aggregating plaintiffs’ claims within individual suits, and not to claim aggregation between suits, even if the suits are “identical” or “splintered for no colorable reason.”

From Hubbard, it becomes clear that with a malleable test like the “colorable reason” test, courts will take advantage and expand the test when it suits their goals. Freeman’s holding was limited “to the situation where there is no colorable basis for dividing up the sought-for retrospective relief into separate time periods, other than to frustrate CAFA.” However, in Hubbard, the suits were not merely divided by time periods, but were also differentiated by plaintiffs and defendants with unique characteristics. Yet, the court still found a way to expand the holding of Freeman by finding that current and former student athletes represented “time periods.” This interpretation is a strained reading of Freeman and Proffitt, and more importantly takes an important step toward limiting the “colorable reasons” that exist for splitting class suits in the Sixth Circuit.

The Eighth Circuit in Marple v. T-Mobile Central, LLC specifically noted “the absence of provisions for aggregating between class actions here suggests that the use of the singular is significant.” Furthermore,

122. Marple v. T-Mobile Cent. LLC, 639 F.3d 1109, 1110 (8th Cir. 2011) (citing 1 U.S.C. § 1 (2012)).
the court found that Congress included in CAFA detailed instructions on jurisdiction and aggregation; thus, if Congress had intended for the courts to aggregate between supposedly identical suits, it would have so indicated.\textsuperscript{123} Applying \textit{Marple}'s reasoning to \textit{Hubbard}, which espoused a bright-line rule for when a plaintiff can be the master of his complaint, it is absurd to believe that Congress intended for the courts to create such exceptions to plaintiffs crafting complaints.\textsuperscript{124}

Congress wanted to expand federal jurisdiction by passing CAFA, but Congress must be assumed to write legislation within the bounds it intends to create.\textsuperscript{125} The Sixth Circuit need not defend Congress from itself by, at best, filling in potential holes in the legislation, or, at worst, expanding the legislation beyond its purpose. The colorable reason test is the beginning of jurisprudence that could spur exceptions to the plain reading of CAFA, and has led other courts to distinguish \textit{Freeman} and prevent the confusion of a statute easily discernible on its face.

The \textit{Marple} court's distaste for the \textit{Freeman} colorable reason test is apparent throughout its decision in both the statutory construction and in statements like, “\textquote{t}he Sixth Circuit ignored the structure chosen by the plaintiffs . . . .”\textsuperscript{126} The court distinguished \textit{Freeman} because “there [was] no indication that Marple artificially divided the lawsuit to avoid the CAFA.”\textsuperscript{127} However, the court provides scant evidence of this, and provides no guidance on whether the defense could prove such an indication.\textsuperscript{128} This omission leaves open the possibility for more defendants to use this argument in the future.

The court in \textit{Barria} v. \textit{Dole Food Co.} proceeded similarly to the court in \textit{Marple} and did not adopt \textit{Freeman}, but at the same time refused to discredit the decision.\textsuperscript{129} In \textit{Barria}, the plaintiffs divided their suits so each would have under 100 plaintiffs, and the defendants argued that \textit{Freeman} should prevent the plaintiffs from “gerrymander[ing] their lawsuit to circumvent CAFA[ ]” and “artificially splinter[ing] their actions to avoid jurisdictional thresholds.”\textsuperscript{130} The Ninth Circuit, like the Eighth Circuit in \textit{Marple}, looked to statutory interpretation and found “[n]othing in CAFA suggests that plaintiffs, as masters of their complaint, may not ‘file multiple actions, each with fewer than 100 plaintiffs, to work within the confines of CAFA to keep their state-law

\textsuperscript{130} Id. at *12–13 (internal quotes omitted).
The preceding reasoning is sound, as CAFA did not speak to anything outside of claim aggregation within one class action. However, the court failed to reject the *Freeman* decision explicitly and merely distinguished the case on the facts. While true that the plaintiffs in *Freeman* had divided their suits by time period, and the plaintiffs in *Barria* divided their suits by “distinct plaintiffs,” neither the former nor the latter are anywhere to be found in CAFA. Applying the *Barria* court’s logic to the *Freeman* case, it would seem that the colorable reason test should be isolated and refuted. However, no court has done this, which will lead only to the problems that plagued class actions before CAFA.

These types of decisions create uncertainty in the field of class actions. The *Freeman* court created a malleable test that was turned into an erroneous bright line rule by the federal district court in *Hubbard*. Then, the Eighth and Ninth Circuits distinguished *Freeman*’s logic in *Marple* and *Barria*, respectively, rather than rejecting the test. Such rulings allow ill-defined tests to linger and propagate.

When drafting CAFA, Congress could have allowed defendants to remove multiple class actions by aggregation upon a showing by a preponderance of evidence that the statutory amount in controversy, minimal diversity, and one-hundred plaintiffs requirements were met. Congress did not do this, however, and the *Freeman* court essentially added this provision to § 1332(d). On its own motion, the *Freeman* court made multiple lawsuits one, and avoided the language of Congress. Nonstatutory, poorly-defined tests lead laws away from their original purpose or intent. Even worse, the practical effect of *Freeman* was to allow the defendant to litigate what the dissent called a “matter of local concern” in a federal court and deprive the plaintiffs of their rights.

In order to further the broad, fairness-based goals of CAFA, Congress should act early to prevent the “colorable reason” test from creating more uncertainty throughout the circuit courts. Varying standards of proof and minor factual distinctions surrounding *Freeman* are creating a confusing CAFA jurisprudence, and perhaps the most straightforward
way Congress could eliminate the circuits’ discord over claim aggregation is to prohibit the practice explicitly.

The court in *Marple v. T-Mobile Central LLC* analyzed the language of CAFA closely and found “the absence of provisions for aggregating between class actions here suggests . . . the singular is significant.”137 This reasoning is sensible, because CAFA is a detailed statute that was debated at length in Congress.138 CAFA specifically offered guidance for the aggregation of claims within a lawsuit,139 yet, as the *Marple* court points out, CAFA did not speak to aggregation between class actions.140 Without guidance on aggregating claims, a procedurally challenging issue,141 courts should not design such malleable and poorly defined tests as the colorable reason test.

An explicit statement following § 1332(d)(6) that outright prevented the aggregation of claims inter-suit rather than intra-suit would carry out not only what is most likely the intent of Congress, but also eliminate a growing disparity in the federal courts.142 In addition, Congress could clarify that the “plaintiff is the master of the complaint” by specifically excluding the intent of plaintiffs and their counsel during the crafting of their complaints from the eyes of judges and defendants in removal motions.

As more defendants test the water throughout the country, the colorable basis test is likely to stick in courts that are not plaintiff-friendly. The test gives judges fodder to either grant or deny removal without clear explanations,143 and it risks recreating and exacerbating the problems of forum shopping and plaintiff-friendly courts if Congress does not clarify the language of the statute. What may seem like a minor problem now can be easily fixed, and if loose jurisprudence is allowed to develop in such a complex field, both plaintiffs and defendants will be at a disadvantage as the law becomes less clear.

The judicial decisions surrounding *Freeman* not only put in conflict the language and intent of CAFA, but also the burdens of the plaintiffs in filing a claim and the defendants in removing it.

137. *Marple v. T-Mobile Cent. LLC*, 639 F.3d 1109, 1110 (8th Cir. 2011).
139. *Marple*, 639 F.3d at 1110.
142. Such an explicit statement in § 1332(d)(6) might read “In any single class action, the claims of the individual class members shall be aggregated to determine whether the matter in controversy exceeds the sum or value of $5,000,000, exclusive of interest and costs, and the claims of class members in separate suits shall not be aggregated.” (emphasis added to potential amended language).
B. Shifting Burdens of Proof and Forum Shopping

Freeman left unanswered what standard of proof CAFA requires for defendants to remove when a plaintiff limits damages to less than the minimal amount in controversy.144 The court used a unique trick by first combining five suits into one with damages totaling $24.5 million. Then, it applied the standard for remanding a case.145 Essentially, the court placed the burden on the plaintiffs to show to a “legal certainty” the damages would not meet the amount in controversy, which was presumed correct under the court-instituted removal.146 The court also ignored the defendant’s logical argument that because there were 300 class members and the amount claimed by each member was $74,000, the amount in controversy would exceed the damage cap of $4.9 million.147

By proceeding in the aforementioned manner, the Sixth Circuit ignored the defendant’s reasonable argument which would have allowed for removal of each suit without aggregation.148 Also, it surely caught both parties off guard and left countless questions unanswered in future litigation. The Senate Judiciary Committee stated that the “new section 1332(d) is intended to expand substantially federal court jurisdiction... [i]ts provisions should be read broadly, with a strong preference that interstate class actions should be heard in a federal court if properly removed by any defendant.”149 The court in Freeman did not require the defendant to show any proof that the cases should be removed.150 The defendant was fortunate, because even though the court found its cursory argument about the claims of the individuals overriding the class amount in controversy “not persuasive,”151 the majority did not allow the plaintiffs to structure the suits and removed the cases sua sponte.152

144. See id.
145. Id.
146. See id.
147. See id. The total amount for 300 plaintiffs claiming $74,000 would be $22.2 million, but the court found the $4.9 million dollar cap for each suit superseded the individual caps. See id.
148. All 300 plaintiffs were in each suit; the suits were merely divided by time. See id. at 406–07. So the court could have said in each suit that if damages were capped at $74,000 per plaintiff, with 300 plaintiffs the damages could be as much as $22.2 million, and not the $4.9 million cap. This would cause problems, however, because in the Sixth Circuit the court states, “Generally, if a plaintiff does not desire to try his case in the federal court he may resort to the expedient of suing for less than the jurisdictional amount, and though he would be justly entitled to more, the defendant cannot remove.” Id. at 409 (internal quotes omitted).
150. Freeman 551 F.3d at 409.
151. Id.
152. Id. The aggregation issue was not raised by defendants. See id.
In future cases similar to *Freeman*, the question will become what standard or type of proof defendants must show to prove that aggregation of claims is warranted. In *Freeman*, the plaintiffs’ lawyer admitted at oral argument that avoiding CAFA was the only reason for structuring the claims in such a way.\(^{153}\) This admission might show that clear and convincing evidence is required for aggregating claims between different suits. On the other hand, perhaps less straightforward circumstantial evidence of attempting to avoid federal jurisdiction would be sufficient if the defendants could show that the plaintiffs are substantially similarly situated and there exists no colorable reason for splitting their claims. Regardless, defendants in the Sixth Circuit, and anywhere else the *Freeman* test may be adopted, are unaware as to how to properly remove a case, yet still are not as disadvantaged as the plaintiffs.

The plaintiffs’ case in *Freeman* was remanded to the district court, where they would need to show to a “legal certainty” that their aggregated claims would not exceed $5 million.\(^{154}\) However, this became nearly impossible after the appellate court found, “plaintiffs’ suits in the aggregate seek up to $24.5 million.”\(^{155}\) Had the plaintiffs been aware of a risk of aggregation, they likely would have sought damages independently in state courts without a class action. And, while the American justice system assumes that citizens know the law,\(^ {156}\) such knowledge becomes difficult when judges make modifications to laws *sua sponte* based on congressional intent. Litigants face difficulty from the colorable reason test because it is a poorly defined strong hammer that judges can use to mold class actions. Future plaintiffs should be sure to have a “colorable reason” when forming their suits, especially in the Sixth Circuit, even though these are not defined by case law or by statute. If plaintiffs want to be sure to litigate their case in state court, they may need to be able to show “to a legal certainty” that the damages do not exceed $5 million.\(^{157}\)

In *Proffitt v. Abbot Labs.*, the case from which *Freeman* derived its reasoning, the court briefly described the burden of proof typically placed on defendants in removal situations, explaining, “CAFA does not alter the fact that the removing defendant has the burden of demonstrating, by a preponderance of the evidence, that the amount in

\(^{156}\) Cheek v. United States, 498 U.S. 192, 199 (1991) (“Based on the notion that the law is definite and knowable, the common law presumed that every person knew the law. This common-law rule has been applied by the Court in numerous cases construing criminal statutes.”).

\(^{157}\) *See Freeman*, 551 F.3d at 409.
controversy requirement has been met.” 158 This statement was disingenuous, however, because while the court concluded that, “[t]he defendant has made the necessary showing that the amount in controversy has been met,” it never explained how the defendant did so. 159

The court discussed at length the policy behind CAFA and why plaintiffs should not be able to split their suits simply by arbitrary time periods, then ultimately determined the claims must be aggregated and removed. 160 In Proffitt, unlike Freeman, no direct evidence, or otherwise, had been presented to show that the plaintiffs had in fact split their suits to avoid federal jurisdiction. 161 Perhaps, in order to avoid Proffitt’s mere facial statement that the defendant “made the necessary showing,” this is why the Freeman court ignored the question as to the level of proof needed to remove when there is a factual dispute as to damages.

Regardless, in both Freeman and Proffitt, the courts find cover for their sua sponte decisions. The Proffitt court concluded that the defendant had “made the necessary showing” for removal without explanation, 162 and the Freeman court required no showing because the five suits were actually only one suit. 163 Again, these decisions take a great weight off the shoulders of removing defendants, while introducing uncertainty into plaintiffs’ litigation.

In the more recent Sixth Circuit case, Hubbard v. Electronic Arts, Inc., the court discussed standards of proof surrounding removal jurisdiction in the Sixth Circuit and found that the “legal certainty” test applied in cases where an amount was specified over the amount in controversy, and the defendant seeks to prove less. 164 The court also found that a preponderance standard applied in cases of unspecified amounts, where a defendant need only show that it is more likely than not the amount exceed the minimum amount in controversy. 165 The court held that because the Freeman court treated the aggregated claims as one “specified amount,” the legal certainty test must apply if the suits

158. Proffitt v. Abbot Labs., No. 2:08-CV-148, 2008 U.S. Dist. LEXIS 72467, at *3 (E.D. Tenn. Sept., 23, 2008) (citing Smith v. Nationwide Prop. & Cas. Ins. Co., 505 F.3d 401, 404 (6th Cir. 2007)). The preponderance standard is also referred to by many courts as the “more likely than not” standard, i.e. if a defendant can show that it is more likely than not that the damages will exceed the minimum amount in controversy, then the case can be removed. See id. at *5.

159. Id. at *13.

160. Id. at *3–13.

161. See id. Remember in Freeman that the plaintiffs’ counsel was on record saying that avoiding CAFA was the only reason for splintering the suits. See Freeman 551 F.3d at 407 (6th Cir. 2008).

163. Freeman, 551 F.3d at 406–11.

165. Id.
are aggregated.166 Thus, once the Hubbard court aggregated the suits, it stated, “the amounts in controversy are aggregated to total nearly $10,000,000. As such, this Court applies the legal certainty test, and further FINDS that the test has been met.”167

Again, the court’s decision gave no indication as to how the defendants carried any burden in Hubbard, and the plaintiffs had no chance to rebut the court’s near-immediate assumption that the amount in controversy met the legal certainty test.168 Because the Freeman test does not include any process, the defendants and plaintiffs in these cases do not make motions or show proof. The courts, in the Sixth circuit at least, bypass these steps and remove cases sua sponte.

The problems with Freeman, Proffitt, and Hubbard are legion because courts use incomprehensible standards of proof to grant removal jurisdiction to defendants. In Freeman, the court “need[ed] not decide the proper standard of proof under CAFA”;169 in Proffitt, the defendant “demonstrated by a preponderance of the evidence that the amount in controversy requirement has been met”;170 and in Hubbard, “the legal certainty test . . . ha[d] been met.”171 What would cause such variation and confusion in substantially similar cases where all the courts are doing is aggregating claims that have no “colorable reason” to be splintered? The confusion arises because no law exists that allows courts to aggregate claims on their own initiative, and it is being developed as the courts act sua sponte. After these three cases, both plaintiffs and defendants are in worse positions because neither party knows what burden it may or may not face in removing or remanding cases. Further, the preceding cases discuss only the Sixth Circuit’s approach; other circuits have even more varying standards of proof required for removal.

The Eight Circuit in Marple v. T-Mobile Central, LLC never reached the question of standard of proof, because it disagreed with the principle of inter-suit claim aggregation.172 However, as “colorable reasons” go, the question in Marple v. T-Mobile, LLC becomes: what exactly did the court find “colorable” about the plaintiffs’ reasons? The Marple court admitted that the plaintiffs structuring was similar to that in Freeman, but distinguished the case and stated, “[i]n contrast, the structure of

166. Id. at *19.
167. Id. at *24.

172. See Marple v. T-Mobile Cent. LLC, 639 F.3d 1109, 1111 (8th Cir. 2011).
Marple’s class actions exactly mirror the underlying ten lawsuits brought by T-Mobile . . . . Moreover, there is no indication that Marple artificially divided the lawsuit to avoid the CAFA.” 173 The court did not adopt the test from Freeman; however, it subtly gave the colorable reason test credence by looking for reasons why the plaintiffs split their case. As noted throughout this paper, CAFA has no explicit requirement that plaintiffs offer any reason for disclaiming damages over $5 million and splitting claims. Yet, the court found it necessary to specify that “there is no indication that Marple artificially divided the lawsuit to avoid the CAFA.” 174 This statement could signify that if there had been evidence in this case of “artificial” claim splitting, the court would have acknowledged the argument. The court did not explain how evidence of “artificially” splitting conflicts with what the court seems to be calling “colorable basis,” here mirroring T-Mobile’s prior litigation. 175

Similarly, in Barria v. Dole Food Co. the Ninth Circuit addressed its own legal standard for removal to federal court. 176 The court began by explaining that the Ninth Circuit “strictly construes the removal statutes against removal jurisdiction, and jurisdiction must be rejected if there is any doubt as to the right of removal.” 177 The court further noted the heavy burden the defendant has to meet in order to achieve removal, including the proper procedural requirements. 178

Regarding the claims in Barria, the defendants merely reviewed the plaintiffs’ complaints and attempted to show that removal jurisdiction under CAFA was appropriate. 179 The defendants argued in part that because 2,485 plaintiffs filed the action in a state court where the minimum jurisdictional limit was $25,000, the amount in controversy would exceed $62 million. 180 However, this reasoning did not persuade the court, and it explained that the defendants did not overcome the “strong presumption against removal jurisdiction.” 181 The plaintiffs divided their claims “alphabetically and by country,” 182 in contrast with

180. Id. at *9.
181. Id. at *9, *11 (internal quotes omitted). Further, the court would not agree to allow the defendants to serve requests for admission to the plaintiffs asking if they admit or deny that they were seeking at least $75,000 in the lawsuit. Id. at *9, *11–12.
182. Id. at *4.
Hubbard, where dividing suits between distinct plaintiffs, current and former NCAA student athletes, was not a “colorable reason.”183 In Hubbard, the court found that plaintiffs representing current and former student athletes too closely resembled division by arbitrary time periods.184 Expanding this logic, then, it is not difficult to see how another court more willing than the Barria court to apply the Freeman test could say that dividing plaintiffs alphabetically and by country is simply a way of dividing the suits by arbitrary time periods over which damages occurred in the different countries.

The Barria defendants made a facially logical argument in support of removal jurisdiction, similar to the argument in Freeman v. Blue Ridge Paper Products, Inc.185 However, it could not overcome the Ninth Circuit’s strong presumption against removal.186 The court followed the language of CAFA closely, and did not allow removal where defendants could not show the amount in controversy was met literally.187 At the same time, the Ninth Circuit placed a burden on defendants that defendants in the Sixth Circuit are less likely to face in the wake of Freeman. Does this mean that the Sixth Circuit has gone rogue in its interpretation of CAFA? Hardly. The Ninth Circuit, too, is manipulating CAFA. CAFA does not state that matters of removal should have a “strong presumption” against the defendants.188 While this might be the Ninth Circuit’s law generally, it conflicts with both the intent of CAFA and the Sixth Circuit’s overly expansive reading of removal jurisdiction. The problems flowing from these decisions are the same problems that CAFA was intended to fix.

Federal consistency in removal jurisprudence is essential if CAFA is to achieve its goals of avoiding forum shopping by plaintiffs and preventing plaintiffs from “gaming the system.” However, what better would let plaintiffs game the system than knowing in the Sixth Circuit they might face claim aggregation, but in the Ninth Circuit there is a strong presumption against removal? In addition to denying courts the ability to aggregate claims statutorily in order to provide some certainty to litigants, Congress could craft a compulsory joinder device similar to

---

184. Id.
185. Barria 2009 U.S. Dist. LEXIS 27926, at *8–12. See also Freeman v. Blue Ridge Paper Prods., Inc., 551 F.3d 405, 409 (6th Cir. 2008) (“We do not rely, however, on Blue Ridge’s argument that the jurisdictional amount is exceeded in each one of the separate cases by virtue of the number of class members (300) and the amount that each class member claimed ($74,000”).
187. Id.
Rule 19 of the Federal Rules of Civil Procedure.\textsuperscript{189} In order to protect
the interests of plaintiffs and defendants, such a practical rule would
dispose of issues through a limited number of proceedings, rather than
through duplicative litigation. A possible reading of such a clause could
incorporate language from Federal Rule 23(b)(3) which governs many
large consumer class actions.\textsuperscript{190} Below in italics are proposed modified
portions of Rule 23(b)(3) which would provide a suitable test for
aggregation between suits:

\textit{Aggregation of class suits may be appropriate if:} the court finds that the
questions of law or fact common to class action claims predominate over
any questions affecting only individual classes, and that a single class
action is superior to other available methods for fairly and efficiently
adjudicating the controversy. The matters pertinent to these findings
include:

(A) the classes’ interests in controlling the prosecution or defense of
separate actions;

(B) the extent and nature of any litigation concerning the controversy
already begun by or against separate classes;

(C) the desirability or undesirability of concentrating the litigation of the
claims in the particular forum; and

(D) the likely difficulties in managing a single class action.\textsuperscript{191}

With light modification, a common rule and widely used class
certification test factors can be applied to not only aggregating
individual claims into a class action, but multiple class actions into a
single class action. Such a clause would further the intent of CAFA in
that it would provide judges with the ability to aggregate class suits into
entities that are more easily removable to federal court, which is what
the Freeman court stretched the law beyond recognition to do.

More importantly, with such a rule, the circuits would develop similar
jurisprudence, and plaintiffs and defendants would be put on notice as to
what their burdens of proof were to either receive or defeat joinder of
suits. Such a system would be vastly superior to that begun by Freeman
where judges, clearly fed up with plaintiffs trying to avoid federal
jurisdiction, have begun to remove suits \textit{sua sponte}, without good
reasoning or consistency.

Other statutory alternatives surely exist, but the aforementioned
statutory additions are two ways to avoid the awkward feeling when a
plaintiff class files a $4,999,999 suit, and the judge has no recourse
other than to design a law not present in CAFA in order to send the class
to the federal courts.

\textsuperscript{190}. \textit{Fed. R. Civ. P.} 23.
\textsuperscript{191}. \textit{Id.} (emphasis added).
IV. CONCLUSION

Since Congress passed CAFA in 2005, plaintiffs’ attorneys have found unique ways to avoid litigating in the federal courts, which are typically less friendly to plaintiffs than many of the state courts before CAFA. However, rather than amend CAFA in order to fix some of the legislation’s holes, Congress has not acted, leaving the courts on their own and understandably frustrated. This frustration led the Sixth Circuit in 
*Freeman v Blue Ridge Paper Products, Inc.* to go beyond the letter of the law and aggregate suits in order to satisfy federal jurisdictional requirements. Other circuits have not followed in 
*Freeman’s* wake; however, courts not adopting 
*Freeman* have looked to its fast and loose reasoning in order to distinguish cases on minor factual differences and a variety of congressional records. Many courts have been forced to make the types of decisions that could be said to be “distinctions without differences,” resulting in confusion regarding when class action claims can be separated and when they cannot. The best way to avoid any further expansion of the aggregation principle in the circuit courts surrounding the 
*Freeman* test is by either explicitly eliminating intersuit claim aggregation or allowing for a defined joinder mechanism in the federal courts that allows plaintiffs and defendants to be put on notice as to when their suits may be aggregated.
